

All over the world, people eat meat. Meat comes from animals. Some people buy meat in a grocery store. Others buy meat from an outdoor stall or maybe catch it themselves.

This is a map of Africa

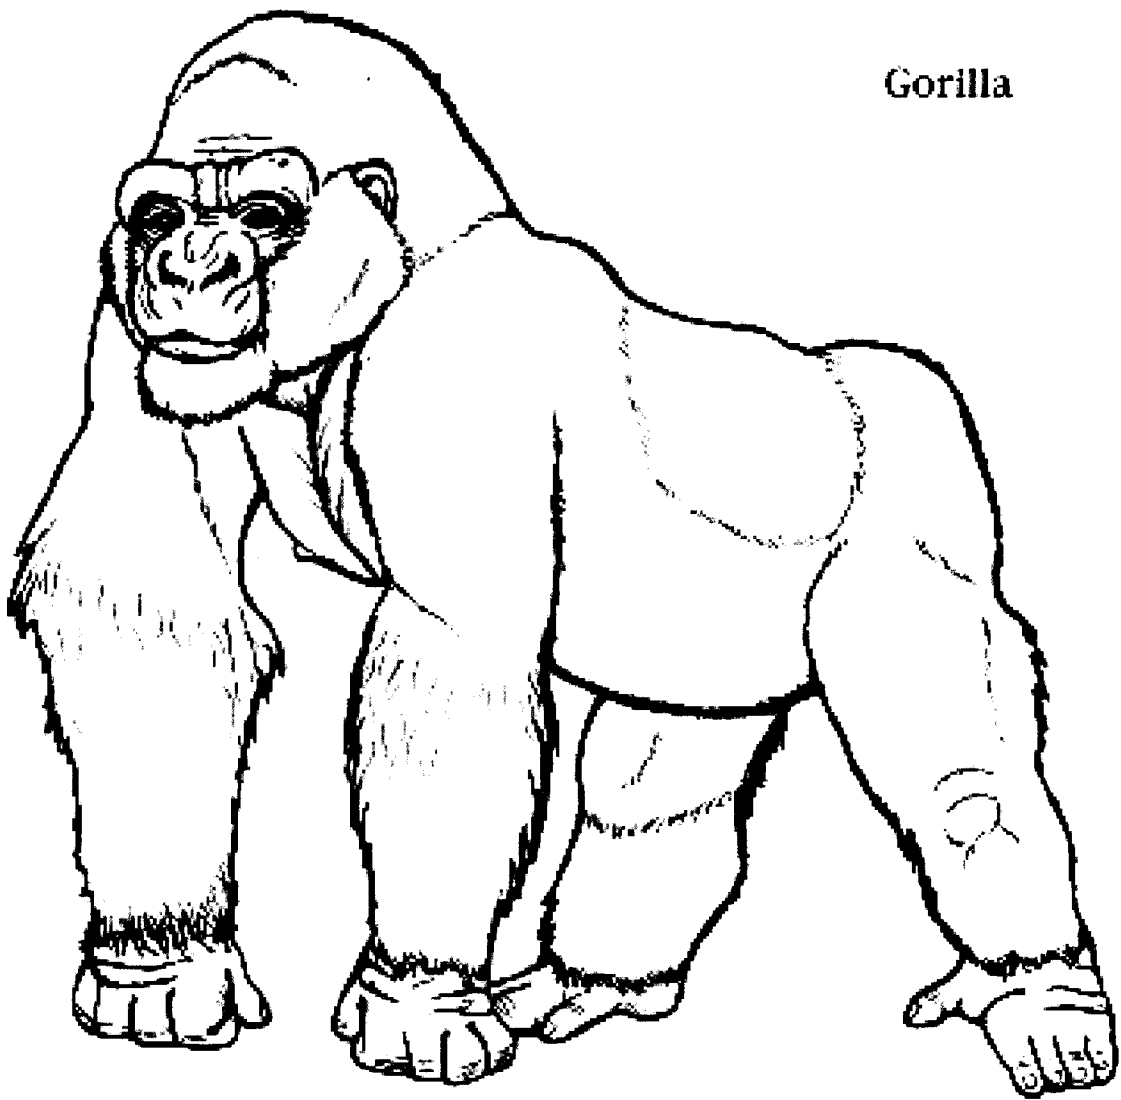

Chimpanzee

Chimpanzees like having company. They can make tools to help them get insects to eat. They can use plants for medicine when they are sick. Most of their food is from plants, but sometimes they hunt bush pigs or duiker or colobus monkey.

Gorilla

Gorillas walk on their feet and their knuckles. They eat plants and sometimes insects. At night, gorillas make a nest of branches to sleep in. Leopards and humans are the only animals that kill gorillas.
